Winsig 3.0 Camping Television Antenna

The WINSIG 3.0 is a single plane log periodic antenna with a unique swivel function to receive transmissions in both the vertical and horizontal planes. This 3rd generation Winsig antenna provides superior UHF and VHF reception throughout Australia. The electronic signal booster provides 26—30dB of additional gain to the already impressive signal capability, making this antenna perfect for use in remote areas.

A key feature of 3rd generation Winsig Antennas, is the high quality of signals received across the entire UHF and VHF bands. This means less dropout of reception on all Australian television stations.

This product has been specifically designed with a flexible mounting system to suit campervans and camper trailers and will fit all 28mm diameter antenna masts.

Technical Specifications

- Polarity - vertical and horizontal
- Frequency band
 - ⇒ VHF 174 to 230 MHz
 - ⇒ UHF 520 to 694 MHz
- Materials - Polycarbonate Plastic and Aluminium.
- Dimensions: 341.5mm L x 280mm W x 38mm H
