## Winsig 3.0 Ultra Retrofit Television Antenna

The WINSIG 3.0 Ultra Retrofit Antenna combines both vertical and horizontal plane log periodic antenna elements. It has been specifically designed to replace existing Winegard and Antennatek units, using the existing mounting hardware.

This 3rd generation Winsig antenna provides ultimate UHF and VHF reception throughout Australia. The electronic signal booster provides 26—30dB of additional gain to the already impressive signal capability, making this antenna perfect for use in remote areas and urban environments alike.

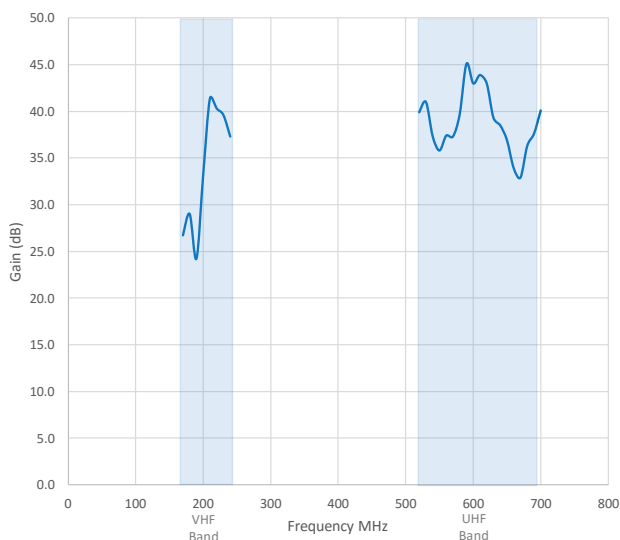

A key feature of 3rd generation Winsig Antennas, is the high quality of signals received across the entire UHF and VHF bands. This means less dropout of reception on all Australian television stations. The extra element in the array of the horizontal antenna provides additional boost in the VHF band, and enhances the directional robustness to ensure our very best signal capability.

### Technical Specifications

- Polarity - vertical and horizontal
- Frequency band
  - ⇒ VHF 174 to 230 MHz
  - ⇒ UHF 520 to 694 MHz
- Materials - Polycarbonate Plastic and Aluminium.
- Dimensions: 980mm L x 400mm W x 135mm H (In full down position)

Frequency Response

Polar plot at 650 MHz
